

KeraLite® with Black Printed Frame

Every masterpiece needs a frame.

“Ultimate Black” frame decoration is printed on the inner side, preserving the natural appearance of KeraLite® glass-ceramic while delivering an **opaque deep black finish** with both technical and aesthetic benefits.

- The black areas are **highly opaque**, concealing both the cast iron/steel frame and seal for a clean, **high-quality** finished assembly.
- The deep, intense black color enables a **modernized stove design** by visually minimizing cast iron/steel components and replacing their appearance with a **sleek black frame**.

Characteristics

- Max L 1500 x H 800 mm
- Thickness 4 or 5 mm
- Flat glass-ceramic only

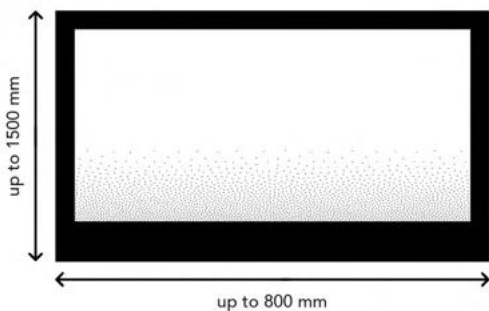

620°C (1148°F)

Black frame or strips,
with or without gradient
dot pattern

Pattern

- Standard decorations include a **frame or strip design** that may feature a **gradient dot pattern** (EK62xx references). Other patterns are available upon request.
- Innovative and custom designs using our **double-sided printing solution** have the ability to create a **three-dimensional effect**.

Resistance

- The black frame is typically located in a "cold" area where temperatures do not exceed 330°C; however, the decoration is **engineered to withstand up to 620°C** for maximum safety.
- The printed surface is **abrasion-resistant**, allowing multiple handling steps during assembly **without damage**.
- The decoration is compatible with most glass-ceramic cleaning products; however, **all chemical residues should be removed** before the next use to preserve its appearance and durability.
